Excellence in Review 2018

THE success in achieving our goal of creating a high-quality archive of technical material relies heavily on the expertise and cooperation of our reviewers and Associate Editors, who donate their time throughout the editorial process. We would like to thank them for their generous contributions.

This is the 11th year for which we recognize and celebrate excellence in review. An excellent review provides a thorough assessment of the technical merits of the work presented in the manuscript, describes the significance of the contribution in the field of oceanic engineering, and states why the work should or should not be published. The constructive criticisms in the review provide guidance to authors in improving the presentation in the manuscript, and also in advancing their research programs.

Please join us in honoring the outstanding reviewers for 2018 pictured below (photos for three others, Nils Haëntjens, Yann Krien, and Vince Myers, were not available).

M. CHITRE, Editor-in-Chief
